Leandro Butto

Java Full Stack Developer

Santa Fe, Argentina (remote) · leandrobutto@gmail.com

LinkedIn · GitHub · Portfolio

Professional summary

Java full stack developer with 3 years of freelance experience, holding a Bachelor's Degree in Computer Science and a degree in Systems Analysis. I build complete web applications with Spring Boot, React and PostgreSQL: from the data model and security to the UI and production deployment. I run my own app in production and have built custom systems for real clients. I'm looking for a remote position as a full stack or backend Java developer, contributing to REST APIs, security, databases and frontend.

Experience

Full Stack Developer · Freelance · 2023 – present

ComoVivo · Personal and couple finance app (own product, in production)

- Live at comovivo.app, with its own domain and transactional emails: salaries, fixed expenses, credit cards with installments, savings and shared expenses for couples.
- Backend with Java 17 and Spring Boot 4: REST API with Spring Security, JWT with rotating refresh tokens, sign-up with email confirmation and privacy of personal data within a couple.
- Business logic for credit cards (closing date, due date and installments), equal, income-based or per-category expense splitting, and a running balance between partners.
- Frontend in React 19 and TypeScript, installable as a PWA, with offline expense entry that syncs without duplicates.
- Deployed with Docker on Render and PostgreSQL on Neon, with Flyway migrations and automatic deployment on every push.
- 76 automated tests: JUnit 5, Mockito and embedded PostgreSQL on the backend; Vitest and Testing Library on the frontend.

Tech stack: Java, Spring Boot, Spring Security (JWT), Spring Data JPA, PostgreSQL, Flyway, React, TypeScript, Tailwind CSS, Docker, JUnit 5, Mockito, Vitest.

Hola Pacha · Online store for a home decor business (client)

- Complete e-commerce for a real business: backend with Java 21, Spring Boot and PostgreSQL, and a React frontend.
- Checkout with online payments through Mercado Pago (REST API and confirmation webhook) and real-time shipping quotes from OCA and Andreani.
- Admin panel so the owner can manage orders, products with photos, discounted bundles and customers without technical help.

- Security with Spring Security, JWT and roles (ADMIN and CUSTOMER); persistence with Spring Data JPA / Hibernate, Flyway migrations and a layered architecture.

Tech stack: Java, Spring Boot, Spring Security (JWT), Spring Data JPA, PostgreSQL, Flyway, Maven, React, Mercado Pago.

Dental Practice System · Management system for dental practices

- Web system to manage patients, appointments, health insurance and clinical records.
- Migrated a Java application from Servlets and JSP to Spring Boot (Spring MVC and Thymeleaf).
- Multi-practice (SaaS) design: each clinic only accesses its own data. Administrator, Dentist and Receptionist roles, with hashed passwords (BCrypt).
- Digital dental chart following Argentine health insurance standards, with a printable form.
- Versioned database with Flyway and deployment with Docker Compose (PostgreSQL, HTTPS and automatic backups).

Tech stack: Java, Spring Boot, Spring Security, Spring Data JPA / Hibernate, Thymeleaf, PostgreSQL, Flyway, Servlets / JSP, Docker.

Skills

- **Languages:** Java, SQL, JavaScript, TypeScript, HTML & CSS
- **Backend:** Spring Boot, Spring Security (JWT), Spring Data JPA / Hibernate, Thymeleaf, Servlets / JSP
- **Frontend:** React, Tailwind CSS, Vite, TanStack Query, PWA
- **Databases:** PostgreSQL, MySQL, Flyway (migrations)
- **Testing:** JUnit 5, Mockito, Spring Boot Test, Vitest, Testing Library
- **Deployment:** Docker, Docker Compose, Render, Neon, Cloudflare (DNS)
- **Tools:** Maven, Git, GitHub, Postman, IntelliJ IDEA, NetBeans
- **Practices:** REST APIs, layered architecture, role-based access control, third-party API integration (Mercado Pago, shipping services, transactional email)
